Professional Summary

Full-Stack Software Engineer with 4+ years shipping production web applications in Next.js, React and TypeScript on Laravel, NestJS, Node.js and PostgreSQL backends. Delivery spans single sign-on (SSO), payment integration, service-oriented architecture, Elasticsearch and Docker-based CI/CD for HR, NGO and property-technology clients.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), PHP, Python, Java, C++, C#, SQL, HTML5, CSS3

Frontend: React, Next.js (App Router), Tailwind CSS, ShadCN UI, TanStack Query, Zustand, Redux, SSR/SSG

Backend: Node.js, NestJS, Laravel, Django, REST APIs, GraphQL, Microservices, Service-Oriented Architecture

Databases & Search: PostgreSQL, MySQL, MongoDB, Elasticsearch

DevOps & Cloud: Docker, Amazon Web Services (AWS), CI/CD, Turborepo, Git, Electron

Practices & Tools: Agile/Scrum, Jira, Single Sign-On (SSO), Cryptography, Search Engine Optimization (SEO), Headless WordPress, Puppeteer

Experience

Software Engineer

ARITS Limited

June 2024 – Present
Dhaka, Bangladesh

- Architected responsive front-end interfaces for 3 production Next.js applications with real-time data synchronisation, global state management and multi-factor authentication (MFA).
- Designed a single sign-on (SSO) flow using middleware-shared encrypted cookies across subdomains, removing repeat logins across 7 platform modules and 4 permission roles.
- Reduced deployment time by 50% by containerising applications with Docker and standardising CI/CD workflows.
- Integrated Stripe payments, notification and messaging services, and partnered with backend engineers on microservice architecture and encrypted data transactions.

Junior Software Engineer

ARITS Limited

Sept 2022 – June 2024
Dhaka, Bangladesh

- Designed and shipped 12+ complex responsive user interfaces in Next.js and TypeScript, including global state management and authentication systems.
- Built a library of reusable Next.js components, reducing duplicated interface code across projects.
- Containerised 40%+ of team deployments with Docker and applied cryptography to secure data transactions within a microservice architecture.

Software Engineer Intern

ARITS Limited

June 2022 – Sept 2022
Dhaka, Bangladesh

- Built server-side rendered (SSR) applications in Next.js and integrated RESTful API endpoints with modern state-management libraries.
- Developed backend services and REST APIs in Laravel, integrating Elasticsearch for optimised data querying and retrieval.

Projects

HumR – Multi-Company HR Platform | Frontend Lead

June 2024 – Present

Next.js 16 | TypeScript | Turborepo | TanStack Query | ShadCN UI | Tailwind CSS | Cryptography

- Architected the front-end codebase for a multi-company HR platform spanning 3 Next.js applications, 7 functional modules and 4 permission personas.
- Implemented single sign-on across subdomains with middleware-shared encrypted cookies, keeping one session valid across every module, and standardised server state on TanStack Query.
- Published shared Turborepo packages for common utilities and interface primitives, removing duplicate implementations across the three applications.

- Delivered reusable interactive components: Dynamic Form Builder, Weekly Routine Builder, Calendar Routine, Attendance Clock In/Out and Attendance Reporting.

Oporajita – The Asia Foundation | Frontend Engineer

2025

Next.js | TypeScript | Elasticsearch | Docker | TanStack Query | Service-Oriented Architecture

- Built a real-time data and collaboration dashboard used by 15 partner organisations across Bangladesh's garment sector, delivered end to end in an 8-week cycle from UX design to deployment.
- Replaced 15 incompatible spreadsheet conventions with a single submission schema, making cross-partner comparison a property of the system rather than a manual reconciliation pass.
- Shipped 4 core capabilities: a donor and project report builder, a collaboration tracker surfacing joint activities, and a historical archive keeping every submission reviewable.

Bullwip – UK Rental Onboarding Platform | Full-Stack Engineer

2025 – Present

Next.js 16 | TypeScript | Laravel | PostgreSQL | Elasticsearch | Docker | ShadCN UI | Tailwind CSS

- Architected a full-stack rental onboarding platform for the UK housing market: Next.js front end, Laravel REST API and PostgreSQL persistence.
- Modelled the multi-party onboarding flow as durable server-side state so landlords, agents and tenants resume mid-application days later instead of restarting; moved property and applicant search onto Elasticsearch once relational queries stopped returning at interactive latency.

Datafast – Desktop Data Automation Platform | Full-Stack Engineer

2024 – Present

Laravel | MySQL | Next.js 14 | TypeScript | Electron | Puppeteer | Docker

- Designed and built the entire system from scratch, packaging the web application as a cross-platform desktop client with Electron.
- Automated browser-based data collection workflows with Puppeteer and normalised front-end data structures to keep large result sets responsive in the interface.

calternatives.org – Centre for Alternatives | Frontend Engineer

Jan 2025

Next.js 14 | TypeScript | Headless WordPress | GraphQL | ACF | Docker | SSG/SSR | SEO

- Built a headless WordPress front end consuming GraphQL with Advanced Custom Fields (ACF), letting editors publish new content types without front-end changes.
- Improved search visibility by 65% through technical SEO: sitemap and robots configuration, structured data and an SSG/SSR rendering strategy.

arits.tech – ARITS Limited | Frontend Engineer

Feb 2024

Headless WordPress | GraphQL | ACF | Next.js | TypeScript | Webflow | Docker | SEO

- Delivered the corporate site for an agency with 400+ projects shipped, built on headless WordPress with GraphQL and ACF-driven content modelling.
- Improved search performance by 45% via sitemap and robots configuration, semantic markup and technical SEO best practice.

Education

Bachelor of Science in Computer Science and Engineering

American International University-Bangladesh

Jan 2018 – Apr 2022
Dhaka, Bangladesh

- CGPA 3.58 / 4.00. Thesis: Machine Learning – training a model to detect sentiment in a sentence.

Certifications

Responsive Web Development – CodersTrust, Dhaka, Bangladesh

Mar 2020
